

ALAA ELDIN WAEI

Flutter Developer

Cairo, Egypt • alaaw440@gmail.com • +20 115 266 0001 • [LinkedIn](#) • [GitHub](#) • [Portfolio](#)

PROFESSIONAL SUMMARY

Flutter Developer with hands-on experience designing, building, and shipping cross-platform mobile applications end to end. Proficient in Clean Architecture, BLoC/Cubit, GetX, GetIt, and SOLID principles, with full-stack capability spanning custom PHP/MySQL REST APIs and deep Firebase integration (Auth, Realtime Database, Firestore, FCM). Delivered 5 client projects on Fiverr with 4 five-star reviews, including TrackQR, a live location-tracking app publicly available on Google Play.

EXPERIENCE

Flutter Developer | Self-Employed (Freelance) *December 2025 – Present*

- Delivered 5 client projects on Fiverr with 4 five-star reviews, covering Flutter UI development, Firebase/REST API integration, and signed Android APK/AAB deployment, including a live, publicly available app on Google Play.
- Built and shipped TrackQR, a live location-tracking app for a Fiverr client: Firebase Auth, real-time location via Firebase Realtime Database, Firestore for user data, and QR-code based tracking, delivered across 3 milestones.
- Solved a platform-level Android bug where requesting foreground and background location permissions too close together silently hid the "Allow all the time" option — redesigned the permission request flow to fix it.
- Implemented a foreground service with a persistent notification to keep background location tracking stable and alive under Android's process-management restrictions.
- Designed and built a PHP/MySQL REST API backend from scratch for an e-commerce application, covering cart, product, and user-management endpoints consumed by a Flutter client.
- Applied Clean Architecture, SOLID principles, GetX, BLoC/Cubit, and GetIt for dependency injection across projects to keep codebases maintainable as they scaled.

PROJECTS

TrackQR — Live Location Tracking & QR-Based Tracking App

- Architected the app using Clean Architecture and BLoC/Cubit, covering authentication, QR generation, and live map tracking screens.
- Built real-time location sharing using Firebase Realtime Database and Google Maps Flutter, with Firestore handling user data and Firebase Remote Config powering a dynamic in-app banner system without requiring app updates.
- Fixed a subtle Android permissions-sequencing bug affecting background location access, and implemented a foreground service with persistent notification to keep tracking alive in the background.
- Independently owned the entire Google Play release process: app signing, AAB generation, store listing setup, and release track management from Internal Testing through to a public production release.
- Currently refactoring the app to a stricter Clean Architecture using Cubit and GetIt for dependency injection, improving testability and separation of concerns.

Aura — E-Commerce Mobile App

- Solely designed and built a custom PHP/MySQL REST API backend from scratch with 30+ endpoints and normalized schemas covering auth, products, categories, cart, orders, coupons, favorites, addresses, and FCM notifications.
- Developed the full Flutter frontend across 15+ screens, structured using MVC with clear separation across controllers, datasources, models, views, core services, and named routing.
- Implemented Arabic/English localization, FCM push notifications, coupon/discount logic, and offline-first local caching with Sqflite alongside OpenStreetMap-based address picking.

Mal3ab — Football Field Booking App (In Development)

- Building a football field booking platform for the Cairo market, designed around a commission plus subscription revenue model for field owners.
- Applying Flutter and Clean Architecture patterns established across prior projects to a live, multi-sided marketplace product.

Real-Time Chat App

- Built a real-time messaging app using Flutter and Firebase, with authentication, Firestore-based message syncing, and dynamic online/offline status indicators.
- Structured Firestore queries specifically to minimize read costs while keeping the UI responsive.

SKILLS

Mobile Development: Flutter • Dart • Android (APK/AAB) • iOS • Cross-Platform Development

State Management & DI: BLoC / Cubit • GetX • GetIt

Backend & APIs: REST API Design • PHP • MySQL • Firebase (Auth, Realtime Database, Firestore, FCM) • Supabase

Architecture: Clean Architecture • MVC • SOLID Principles • Design Patterns • Offline-First

Storage & Data: Sqflite • Local Caching • JSON Parsing • Shared Preferences

UI/UX & Design: Figma • XD-to-Flutter Conversion • Responsive UI • Material Design

Tools & Workflow: Git • GitHub • VS Code
Deployment & Release: Google Play Console • App Signing (AAB) • Release Tracks (Internal Testing → Production) • Store Listing Optimization
Web (Basics): HTML • CSS • JavaScript • React • Python

EDUCATION

Bachelor of Business Information Systems
Arab Academy for Science and Technology • Cairo, Egypt • Feb 2021 – Jul 2025 • GPA: 3.1

CERTIFICATES

Flutter & Dart: SOLID Principles and Design Patterns — Udemy, December 2025
BLoC/Cubit State Management — Advanced Flutter — Udemy, 2026
Flutter Mobile App Development (Android & iOS) — Black Horse Courses, September 2024

LANGUAGES

Arabic — Native • English — Fluent
